NOTICE OF ROADWAY WORK AND RECLAMITE APPLICATION **START DATE RESCHEDULED**

The Greyhawk Landing Community Development District has contracted with Pavement Technology, Inc. for the application of an asphalt pavement maltene rejuvenator (Reclamite). Attached is a map of the locations where the Reclamite will be applied. Work is scheduled to commence the week of November 27th.

The following are a list of questions and answers you should be aware of:

How disruptive is the pavement maintenance going to be?

Any road work will cause surrounding residents some inconvenience, for which we apologize. On the day prior to road work in your area, PTI's road crews will post door hangers to notify every household and business that road work will be performed the following day. Our crews work as efficiently as possible to minimize disruption. You will have access to your drive at all times. The sand cover applied to the treated surface will be swept up by our crews within two days of application. Please use caution when driving on loose sand. Please refrain from using lawn sprinklers, washing cars or conducting any other activities that will allow water onto the roadway. Successful application requires a dry pavement.

What if it rains on the scheduled day?

Rain will delay work until the following day.

What about vehicles parked on the roadway?

If you have vehicles parked on the road, you will need to remove them between the hours of 7:30 a.m. and 5 p.m. We regret this inconvenience, but it is essential to the successful restoration of your roads.

What if I need to drive in the work area during application hours?

Our road crew is trained to accommodate local access to the roadway. For your safety, we ask that you observe all posted signs and all flagman directions. If you accidentally drive onto a freshly treated surface use caution and reduce your speed to 5 mph.

When can my children or pets walk on the treated areas?

To avoid tracking product into your home or business, please do not allow children or pets to play or walk on the roadways until the sand covering has been removed.

What about PTI product tracked onto our driveway?

Any PTI material tracked onto drives will weather off in three weeks or less, leaving no stain.

Is the product being used safe?

The penetrating sealer being used in your neighborhood is a standard product that has been successfully used on America's roadways since the early 1970s. It meets or exceeds all EPA, federal, state, local and industry performance requirements.

Will the application be accompanied by unpleasant odors?

There is minimal odor associated with our product, and what odor there is dissipates quickly.

Why is this road work necessary?

Timely road maintenance prevents more disruptive road replacement and reduces taxpayer costs by prolonging the service life of existing pavement. Preventive maintenance is the most economical use of your taxpayer dollars. Our product simply restores to the pavement the oils that have been removed through exposure to sun and weather. Once sealed, your roadways will again be water and weather resistant.

If you must drive over the product **prior to the area being sanded**, please **stay off any brick paver driveways and DO NOT park in your garage.**
